

Morning Handoff - 2026-03-09

Where to start

App:

- owner link: <http://127.0.0.1:8001/?actor=Gq1AgKKfLaB-9qgAOqQuOA>

Best first review slice for the morning:

- collection: **Review: Landscaping Follow-Up - 2026-03-09**
- collection id: **ba65d193-5dc4-4650-ae1a-be77db2e85e4**
- count: 27

Reason:

- Jim completed the main **Track** -> **Construction** pass
- the remaining conceptual ambiguity is now concentrated in landscaping
- that slice includes both:
 - landscape mood / precedent items that should stay **Style / Decor**
 - lot / drainage / site-landscaping execution items that should stay **Construction**

What changed overnight

Review workflow

- one-by-one review now uses the same track-review model as the modal
- review card now shows the asset ID
- one-by-one keeps a local draft of the track + reason while Jim types
- undo / go-back restores the prior item with its typed reason intact
- **Mark irrelevant** is now the dedicated irrelevant action
- both modal review and one-by-one review now include a structured **Review focus** (optional) field:
 - **Landscaping**
 - **Inspection**
- the track dropdown now only lists:
 - **Style / Decor**
 - **Construction**
 - **Maintenance / DIY**

Safety / hygiene

- browser automation scratch output is now gitignored:
 - **.playwright-cli/**
 - **.claude/worktrees/**
- **CONTEXT.md** remains gitignored and was already removed from Git tracking earlier in the session

Review results from the construction pass

Recent active overrides persisted during the pass window:

- `construction_concern` = 76
- `style_product_decor` = 10
- `irrelevant` = 5
- `home_maintenance_diy` = 4
- total persisted in the pass window: 95

Current active Jim track overrides overall:

- `construction_concern` = 157
- `style_product_decor` = 22
- `irrelevant` = 11
- `home_maintenance_diy` = 5
- total active Jim track overrides: 195

Landscaping notes across active Jim overrides:

- landscaping-note items: 27
- current split:
 - `construction_concern` = 23
 - `style_product_decor` = 4

Recommended next order

1. review the landscaping follow-up collection
2. use **Review focus = Landscaping** instead of relying on free-text notes for new review decisions
3. add **Inspection** as an explicit construction sub-category after the landscaping pass
4. return to source-link conflicts only after the landscaping split feels stable
