

Morning Handoff - 2026-03-09

Current state

App:

- owner link: <http://127.0.0.1:8001/?actor=Gq1AgKKfLaB-9qgAOqQuOA>

Completed focused review slices:

- collection: Review: Landscaping Follow-Up - 2026-03-09
- collection id: ba65d193-5dc4-4650-ae1a-be77db2e85e4
- reviewed result:
 - construction_concern = 24
 - style_product_decor = 3
- collection: Review: Inspection Follow-Up - 2026-03-09
- collection id: 08ba40fe-a7ed-4da8-bfe8-a0edd67b605b
- reviewed result:
 - construction_concern = 2

Current reference runs:

- track_gate
 - run id: 9a308297-d1f1-4509-b29c-d071e2f2d66d
 - counts:
 - * style_product_decor = 4301
 - * construction_concern = 189
 - * home_maintenance_diy = 7
 - * irrelevant = 172
 - * ambiguous = 282
- multi_axis_inference
 - run id: 98f95cbb-70bf-4223-9736-d1a23ecf94dc
 - note: use source-link evidence for construction concern-domain inference after landscape and inspection review

What changed overnight

Review workflow

- one-by-one review now uses the same track-review model as the modal
- review card now shows the asset ID
- one-by-one keeps a local draft of the track + reason while Jim types
- undo / go-back restores the prior item with its typed reason intact
- Mark irrelevant is now the dedicated irrelevant action
- both modal review and one-by-one review now include a structured Review focus (optional) field:
 - Landscaping
 - Inspection
- the track dropdown now only lists:

- Style / Decor
- Construction
- Maintenance / DIY
- construction axis inference now also uses stored source-link text for sub-category assignment

Safety / hygiene

- browser automation scratch output is now gitignored:
 - .playwright-cli/
 - .claude/worktrees/
- CONTEXT.md remains gitignored and was already removed from Git tracking earlier in the session

Review results from the construction pass

Recent active overrides persisted during the pass window:

- construction_concern = 76
- style_product_decor = 10
- irrelevant = 5
- home_maintenance_diy = 4
- total persisted in the pass window: 95

Current active Jim track overrides overall:

- construction_concern = 158
- style_product_decor = 21
- irrelevant = 11
- home_maintenance_diy = 5
- total active Jim track overrides: 195

Landscaping follow-up final result:

- reviewed items: 27
- split:
 - construction_concern = 24
 - style_product_decor = 3

Inspection follow-up final result:

- reviewed items: 2
- split:
 - construction_concern = 2

Inspection domain status:

- inspection_quality_control is now a live concern_domain
- current count in the latest axis run: 2
- one reviewed inspection item still remains pinned to:

- `concern_domain = plans_code_permits`
 - `project_phase = permit_code`
- reason:
 - it has older active manual axis overrides from the earlier workflow
 - those were not removed automatically

Recommended next order

1. use the modal / one-by-one classification-review workflow on `source_link_conflicting_grouped.html`
2. decide whether to clear the older manual axis overrides on the one inspection item that is still pinned to `plans_code_permits`
3. promote **Landscaping** into an explicit cross-track facet design
4. return to consuming v2 axes in report generation after the source-link conflict slice shrinks
